

The patent-pending NUSSBAUM OTTO is the reinvention of car lifting and workshop design. 75 years of NUSSBAUM innovation and experience has lead us to this revolutionary design. We are proud to name this lift after our founder Otto Nussbaum.

### WHY IS THE OTTO SO REVOLUTIONARY?

- OTTO changes the way you lift your vehicles.
- OTTO changes the way your workshop looks.
- OTTO always provides the best access for the job.
- OTTO prepares your workshop for electric vehicles including battery exchanges.

We hope you will consider the NUSSBAUM OTTO for your next lift purchase. If you have questions or need to find a NUSSBAUM distributor, please contact us using info below.

**MORE ROOM  
THAN ALL THE REST.**

**INTRODUCING THE NEW  
OTTO 2-POST.**

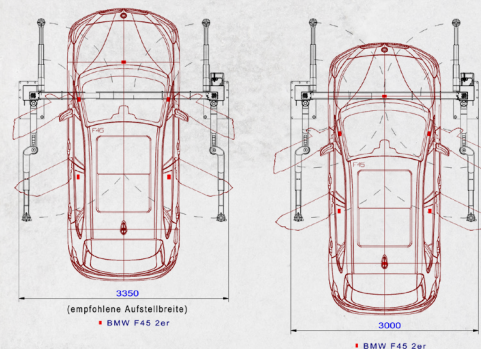

The OTTO is the first lift named after our founder, for the benefits it gives to operators, as well as the productivity in terms of space and dollars to the owner.

### OTTO HIGHLIGHTS

- Patent-pending two-post lift that offers a completely new way to lift cars and to layout your workshop.
- OTTO is ready for new technologies like electric cars and battery exchanges.
- Can be installed as close as 118" apart and still reach most passenger vehicles.
- Standard install at 124".
- Always open the doors.
- Obstruction free access to the areas you need to work on.
- OTTO allows for new service opportunities with electric cars. The patent-pending lift offers full access underneath the car which allows all covers to be removed to get to the vehicles batteries.
- **Lift 100% manufactured in the USA**
- 9,000 lbs lifting capacity

## Save up to 20 sqft per lift when you install the All-New OTTO two-post lift.

Installing the OTTO at a width of 118" you not only optimize your workshop space, you can also install it 40" closer to the wall than any other 2-post lift on the market. This all-around space savings gives you more access around the vehicle with much less effort. The 118" install is perfect for any shop that works on standard passenger cars, but also pickup trucks. Its narrow installation and long arm reach make it very easy to reach frames on trucks, as well as pick up points that are far apart.
